# Deploy Express Server with Vercel

1 Create a file at the same level as your package.json. Name this file vercel.json and have it include the following information:

```
{
"version": 2,
"builds": [
{
"src": "index.js", //this will be whatever your file is named, so it may not be index.js
"use": "@now/node"
}
],
"routes": [
{ // Specify which paths will route to a destination using a regex
"src": "/(.*)",
// Specify the paths' destination
"dest": "index.js" //this will be whatever your file is named, so it may not be index.js
}
]
}
```
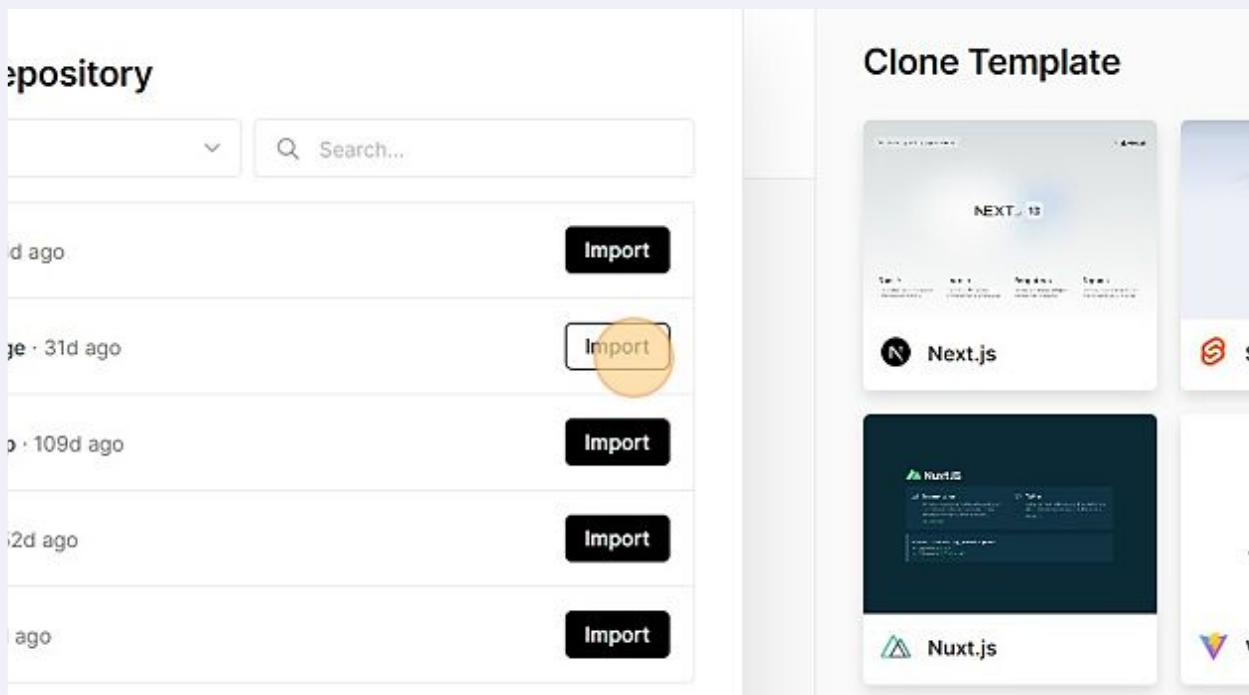

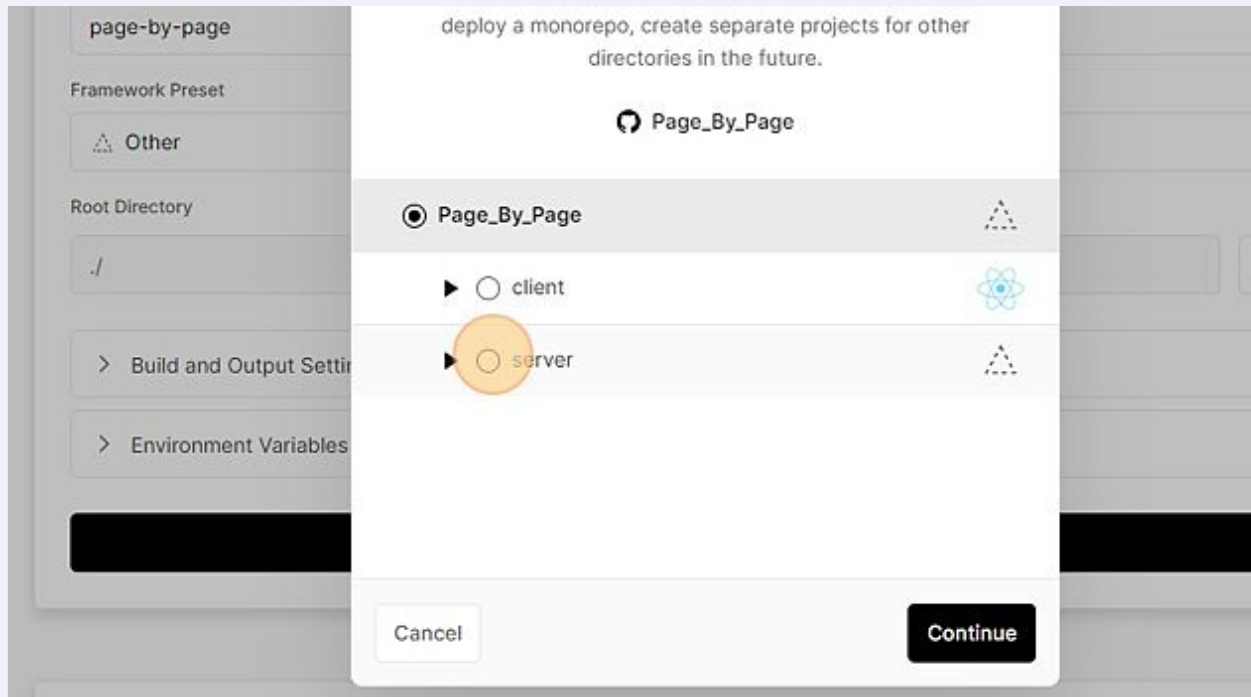

2 Navigate to vercel.com/dashboard

3 Click "Project"

5 Click edit if you are working with a monorepo.

6 Click Deploy. This may take a few minutes to complete, but you are done! You have deployed your express server on Vercel.
